

OUR GOAL:

For you to be happy with your investment and experience with Use Eye Equipment.

Since 1998, I have been working to make it as easy and economical as possible for YOU to purchase pre-owned ophthalmic equipment that is reliable, works like new, and can save YOU up to 50% off the price of new!

BUYING EQUIPMENT:

STEP #1. Avoid buying new.

Unless you require the technology of a brand-new product, it does not make good business sense in today's market to spend the extra money.

New equipment depreciates as soon as you get it into your office. Like a new car depreciates about 20% as soon as you drive it off the lot.

STEP #2. Trade-in worn out stuff with refurbished like new equipment:

1. When the unit is starting to make funny noises or sometimes works and other times doesn't.

2. When your staff complains about the fuzzy screen, the buttons that are not pushing and stops printing. You get the message.

3. When you don't have what you need to offer your patients more services, care, and solutions.

4. When you are losing money referring the patient to the other doctor down the street.

Used vs Refurbished:

Many equipment companies buy used stuff sitting around in storage or on its last leg, check that it turns on, and resell it. In contrast, we purchase equipment no longer needed; our factory-trained [technicians](#) inspect it thoroughly and repair and replace old with new parts to factory specs. As a result, you get diagnostic and surgical equipment that is like new and reliable, and you benefit from getting the best and most reliable equipment possible.
